#### **Features**

- Non-Isolated Class I driver
- No Afterglow
- Dim-to-Off with Standby Power ≤ 0.5W @ 230Vac
- Dimming Range: 0.4%-100%
- 3\*600W Independent Programmable Channels & Support Common Anode Output Connection
- Max Remote Distance Up to 300 Meters
- Ultra High Efficiency (Up to 97%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) via DALI/DMX-RDM
- DALI-2 and D4i Certified & DMX-RDM & 3-Timer-Modes Dimmable
- Single-channel (1\*DT6 or 1\*DMX) Operating Mode
- DALI-2/DMX-RDM Controls Up to 33 fps
- Integrated Power Metering with High Accuracy up to  $\pm 1\%$
- Thermal Sensing and Protection for LED Module
- Low Inrush Current
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 10kV, CM 10kV
- All-Around Protection: IOVP, IUVP, OVP, SCP, OTP
- IP66
- IK08 Enclosure
- 5 Years Warranty

### **Description**

The NES-1K8TxxxBC series is a 1800W, 3 channels, constant-current, programmable and IP66 LED driver that operates from 198-457 Vac input with excellent power factor. Created for many lighting applications including sports, high mast, UV-LED, aquaculture and horticulture, etc. The dimming control supports two-way communication via DALI-2 and complies with D4i, furthermore it incorporates DMX-RDM dimming. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

# **Models**

Adjustable Output	Full-Power Current	Default Output	•	Output Voltage	Max. Typical Output Efficiency		Typical Power Factor		Model Number
Current Range	Range(1)			5	Power		220Vac	400Vac	Model Number
0.0048-2.1A	1.2-2.1A	1.2 A	198~457Vac 255~500Vdc	176 ~ 500Vdc	1800 W	97.0%	0.99	0.96	NES-1K8T210BC

**Notes:** (1) Output current range with constant power at 600W per channel.

- (2) Certified voltage range: 220-415Vac
- (3) Measured at 100% load and 400Vac input (see below "General Specifications" for details).

# Input Over Voltage Protection Diagram

### External Thermal Protection

This needs an external circuit which locates on the hottest part of LEDs to protect the whole lumianires when the temperature exceeds the ratings. The circuit will be connected by V+ LED and OTP terminal on driver. The default protection temperature point is  $90^{\circ}$ , it can be changed by Inventronics programmer along with the actual target.

Strobe function

NES-1K8 driver supports strobe function up to 33 fps from 100% dimming to 0% change forth and back. In order to protect relays reliability, the relays will still keep 3s 'ON' status when receiving the dim-to-off command and then enter "OFF' status" without receiving dimming ON command. but it will immediately operates back to "ON" status if receiving the dimming on command, so the relays will not operate 'ON' and 'OFF' frequently in fast strobe operation within 3s duration time in default mode. When the duration time of strobe operation is between 3s and 15 minutes , the commands below need to be added for ensuring the relay lifetime.

33fps = 33 dimming status per second

# **Dimming (DALI Dimming Mode)**

#### DALI-2 Dimming

The recommended implementation of the dimming control is provided below.

#### Implementation: DALI-2 Dimming

# **Dimming (DMX-RDM Dimming Mode)**

#### DMX-RDM Dimming

The recommended implementation of the dimming control is provided below.

# Implementation: DMX-RDM Dimming

**Note:** (1) Up to 32 drivers may be daisy-chained, terminated by a 120 ohms resistor (connected between DMX+ & DMX- at the last driver)

- (2) 300m maximum length
- (3) 100m maximum between drivers
- (4) For best performance, a characteristic impedance of 120 ohms should be maintained for the entire length of the control line.

Specifications are subject to changes without notice.

All specifications are typical at 25°C unless otherwise stated.

Rev.A

#### Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- **Self Adapting-Midnight**: Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time.
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

#### Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

#### End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.
